ASSIGNMENT 2

Due date: 17-19-20/09

23/9 -

The requirement of an OLD library management system in the University is described as follows:

The functional requirements for an automated university library circulation system include the need to support searching, borrowing, and book-maintenance activities. The system should support searching by title, author, keywords, and ISBN. Searching the library's collection database should be available on terminals in the library and available to potential borrowers via the World Wide Web. If the book of interest is currently checked out, a valid borrower should be allowed to request the book to be returned. Once the book has been checked back in, the borrower requesting the book should be notified of the book's availability. The borrowing activities are built around checking books out and returning books by borrowers. There are three types of borrowers: students, faculty and staff, and guests. Regardless of the type of borrower, the borrower must have a valid ID card. If the borrower is a student, having the system check with the registrar's student database validates the ID card. If the borrower is a faculty or staff member, having the system check with the personnel office's employee database validates the ID card. If the borrower is a guest, the ID card is checked against the library's own borrower database. If the ID card is valid, the system must also check to determine whether the borrower has any overdue books or unpaid fines. If the ID card is invalid, the borrower has overdue books, or the borrower has unpaid fines, the system must reject the borrower's request to check out a book; otherwise the borrower's request should be honored. If a book is checked out, the system must update the library's collection database to reflect the book's new status.

The book-maintenance activities deal with adding and removing books from the library's book collection. This requires a library manager to both logically and physically add and remove the book. Books being purchased by the library or books being returned in a damaged state typically cause these activities. If a book is determined to be damaged when it is returned and it needs to be removed from the collection, the last borrower will be assessed a fine. However, if the book can be repaired, depending on the cost of the repair, the borrower might not be assessed a fine. Finally, every Monday, the library sends reminder e-mails to borrowers who have overdue books. If a book is overdue more than two weeks, the borrower is assessed a fine. Depending on how long the book remains overdue, the borrower can be assessed additional fines every Monday.

=====

The University wants to upgrade the system **LibSys** so that:

- Borrower can search, order the needed items via web internet or smart phone
- Borrower also may extend, check availability and reserve books via web or smartphone
- Borrower may pay fine online with smartphone
- Borrower may request to ship books by drone (flying device)

Your task:

1. Using context diagram to describe **LibSys**
2. Using feature tree to describe **LibSys**
3. Using table to describe actors, use cases of **LibSys**
4. Draw a use case diagram with two levels:
 - Overall level
 - Detail/level 1
5. Write 10 scenarios and 10 use stories with corresponding acceptance criteria
6. Draw 3 activity diagrams/swim lane:
 - Two diagrams for borrowing and pay fines by borrower
 - One for staff processing borrows via web/phone + drone
7. Defining class names from 10 scenarios and draw 10 CRC card for your selected classes
8. Draw a class diagram (analysis phase): class name + attributes + (methods-option) + relationships + multiplicity
9. Draw sequence diagram for borrower borrowing books
10. Generate data model

Template for writing actors – use case

User Story	Acceptance Criteria
As a shopper I want to view a list of products so I can select some to purchase	<ul style="list-style-type: none"> - See a thumbnail image of each product - Click to view detail for a product - Add to cart from detail page - Search for a product

	<ul style="list-style-type: none"> - View product by category
As a shopper I want to review my cart so I can make adjustments prior to check out	<ul style="list-style-type: none"> - View quantities and items in the cart - See a total cost before tax and shipping - Remove items - Adjust quantity of items - Click to navigate to a product detail page
As a shopper I want to check out so I can get my products shipped to me	<ul style="list-style-type: none"> - Trigger checkout from any page , if there are items n the cart - Enter a shipping address - Enter a billing address - Enter a credit card number

The screenshot shows a web browser window with a user story template. The browser has several tabs open, including 'Software Architecture', 'Pinterest', 'Data Structure and Algorithms', and 'Em Gai Dám Đăng M'. The active tab is a Pinterest page with the URL 'pinterest.com/pin/807833251882080010/visual-search/?x=10&y=10&w=544&h=421.52442996742678&cropSource=6'. The user story template is displayed in a window, showing a list of user stories and their corresponding acceptance criteria.

User Story	Acceptance Criteria
As a shopper I want to view a list of products so I can select some to purchase	<ul style="list-style-type: none"> * See a thumbnail image for each product * Click to view details for product * Add to cart from detail page * Search for a product * View products by category
As a shopper I want to review my cart so I can make adjustments prior to checkout	<ul style="list-style-type: none"> * View quantities and items in the cart * See a total cost before tax and shipping * Remove items * Adjust quantity of items * Click to navigate to a product detail page
As a shopper I want to check out so I can get my products shipped to me	<ul style="list-style-type: none"> * Trigger checkout from any page, if there are items in the cart * Enter a shipping address * Enter a billing address * Enter a credit card number * Show total including tax and shipping before finalizing * Show confirmation message after finalizing * Verify payment via our payment processor
As a shopper I want to review my orders so I can see what I've purchased in the past	<ul style="list-style-type: none"> * View a list of open and completed orders * See the status of the order * Navigate to the details of the order * Include a tracking number if the order is shipped but not delivered * Contact customer service about an order from the details page
As an administrator I want to modify the list of products so I can adjust our offerings over time	<ul style="list-style-type: none"> * Add or remove products * Modify product images
